Public-records data analysis

Providence, RI | 347.419.7395 | lfneaney@gmail.com

I turn tax rolls, assessor files, flood maps and public records into a dataset that answers one specific question, and a short report that holds up when someone else checks it.

WHAT I DO

Tax-exempt property audits for cities and towns. Every exempt parcel with its owner, class, assessed value and the clause of § 44-3-3 behind it; the parcels that moved from taxable to exempt year over year; what payment-in-lieu agreements and the state PILOT cover and what they don't. For councils and administrators going into a negotiation with a college or hospital.

Data analysis for litigation. Property-tax appeals (comparable-property analysis from assessor and sales data), housing and tenant cases, and public-records disputes, where the question is what a record set should contain.

Research for policy organizations. How many units a law actually reaches, who bears a cost, what a map says about who is protected. Delivered as a report, the dataset and the code.

Data for newsrooms. A dataset and a check behind a single story, on deadline.

HOW IT WORKS

A 20-minute call to scope the question. A fixed fee, quoted in writing. Then the dataset, the code and a short plain-language report, with the method open to review.

RECENT WORK

-
- **Rent-stabilization coverage, Providence.** Joined the tax roll to assessor parcel data (96% match) to count the rental units the ordinance would cover: about 70%, against the city finance office's estimate of under 44%. Method and code shared with City Council staff for review.
 - **Inside the Line** (insidetheline.org). What the Fox Point Hurricane Barrier protects: 2% of the city's residents, 16% of its jobs, 8% of its assessed value, more than half of it tax-exempt.
 - **Tax-exempt property audit, Providence.** Parcel-by-parcel, year over year, with the statute behind each account; findings confirmed on the record by the deputy assessor.
 - More than fifteen APRA and FOIA requests to city, state and federal agencies. Commentary in the *Boston Globe* (Rhode Island) and *ecoRI News*.

BACKGROUND

Completed MS coursework in mathematics at NYU's Courant Institute; no degree conferred. Head of partner development analytics at Sony Music (a seven-person team; revenue forecasting for a \$2 billion-a-year business; the model behind \$505 million in catalog acquisitions). Earlier: Kelton Global, Hearst, the New York Yankees.
