Independent music catalog valuation and royalty review

A catalog is worth what its future royalties are worth. I estimate that from the statements, independently of any buyer or broker, for a fixed fee agreed up front.

WHO IT'S FOR

Songwriters and artists deciding whether to sell, keep or borrow against a catalog. Estates that need a defensible value. Small labels and publishers, and the attorneys and managers who advise all of them.

WHAT YOU GET

Catalog valuation. Royalty history normalized by source and territory; each song's decay curve by age and format; a forecast of future earnings with a range, not a single number; the value at several discount rates; and a check against the multiples buyers are paying. Delivered as a short report you can take into a negotiation, with the model behind it.

Royalty review. Statements checked line by line against streaming volumes and the rates your agreements set, to find what's missing or misallocated before you sell or renew.

WHY INDEPENDENT

Free valuations usually come from someone who earns on the sale. Bank-style valuations can cost more than a small catalog earns in a year. I have no stake in the deal, and the fee doesn't depend on the answer.

BACKGROUND

- Head of Partner Development Analytics, Sony Music (Director). Built the investment model behind the Som Livre and Paul Simon catalog acquisitions (\$505 million), using local regression and Bayesian (MCMC) methods.
- Built a royalties valuation model that was adopted across the industry, and rebuilt revenue forecasting for a \$2 billion-a-year business with machine learning.
- Led the analytics for Sony's streaming partners, including the Spotify renewal.
- Completed MS coursework in mathematics at NYU's Courant Institute; no degree conferred. DJ and record dealer since 2010.

HOW IT WORKS

A 20-minute call to understand the catalog and the decision. A fixed fee, quoted in writing. Statements shared securely, and the report delivered in about two weeks. Everything you send is kept confidential.
